

Step 1: Project and Files

```
C:\mljuly26\L18>mkdir p1_profile_app
C:\mljuly26\L18>cd p1_profile_app
C:\mljuly26\L18\p1_profile_app>notepad app.py
C:\mljuly26\L18\p1_profile_app>mkdir templates
C:\mljuly26\L18\p1_profile_app>cd templates
C:\mljuly26\L18\p1_profile_app\templates>notepad home.html
```

Step 2: Coding

app.py

```
from flask import *
from sqlite3 import *

def db_setup():
    con = None
    try:
        con = connect("profile.db")
        sql = "create table if not exists student(id integer primary key autoincrement, name
text, phone int, gender text, languages text)"
        cursor = con.cursor()
        cursor.execute(sql)
        con.commit()
        print("done")
    except Exception as e:
        con.rollback()
        print("issue ", e)
    finally:
        if con != None:
            con.close()

db_setup()

app = Flask(__name__)

@app.route("/", methods=["POST", "GET"])
def home():
    if request.method == "POST":
        name = request.form.get("name")
        phone = request.form.get("phone")
        gender = request.form.get("gender")
        languages = ""
        if "py" in request.form:
            languages += " Python "
        if "ja" in request.form:
            languages += " Java "
```

```

if "js" in request.form:
    languages += " JavaScript "
con = None
try:
    con = connect("profile.db")
    sql = "insert into student(name, phone, gender, languages) values (?, ?, ?,
?)"

    cursor = con.cursor()
    cursor.execute(sql, (name, int(phone), gender, languages))
    con.commit()
    print("done")
    msg = "saved"
    return render_template("home.html", msg=msg)
except Exception as e:
    con.rollback()
    print("issue ", e)
    msg = "issue " + str(e)
    return render_template("home.html", msg=msg)
finally:
    if con != None:
        con.close()

else:
    return render_template("home.html")

if __name__ == "__main__":
    app.run(debug=True, use_reloader=True)

```

home.html

```

<html>
  <head>
    <title>
      Profile App by Kamal Sir
    </title>
    <style>
      * {
        font-size: 30px;
        text-align:center;
        font-family: Cambria;
      }
      body {
        background-color: linen;
      }
      .fc {
        border:solid;
        padding:2%;
        width:50%;
        margin:auto;

```

```

        border-radius:30px;
        background-color:white;
    }
</style>
</head>
<body>
    <h1> Fill The Form </h1>
    <div class="fc">
        <form method="POST">
            <input type="text"
                name="name"
                placeholder="Enter Name"
                required />
            <br/><br/>
            <input type="number"
                name="phone"
                placeholder="Enter Phone"
                required />
            <br/><br/>
            <label> Select One </label>
            <br/>
            <input type="radio"
                name="gender"
                value="male"
                checked=true
            />Male
            <input type="radio"
                name="gender"
                value="female"
            />Female
            <br/><br/>
            <label> Select Languages </label>
            <br/>
            <input type="checkbox"
                name="py"
            /> Python
            <input type="checkbox"
                name="ja"
            /> Java
            <input type="checkbox"
                name="js"
            /> Javascript
            <br/><br/>
            <input type="submit" />
        </form>
    </div>
    <h2>
        {{ msg }}
    </h2>
</body>
</html>

```

Step 3: run the app

```
C:\mljuly26\L18\p1_profile_app\templates>cd..  
C:\mljuly26\L18\p1_profile_app>python app.py
```

Step 4: check the database

```
C:\mljuly26\L18\p1_profile_app>sqlite3 profile.db  
SQLite version 3.53.1 2026-05-05 10:34:17  
Enter ".help" for usage hints.  
sqlite> select * from student;
```

id	name	phone	gender	languages
1	amit	778	male	' Python Java JavaScript '

```
sqlite>
```

Step 5: deployment
