

Step 1: Project and Files

```
C:\mljuly26\L17>mkdir p2_bungalow_price_app
C:\mljuly26\L17>cd p2_bungalow_price_app
C:\mljuly26\L17\p2_bungalow_price_app>notepad app.py
C:\mljuly26\L17\p2_bungalow_price_app>mkdir templates
C:\mljuly26\L17\p2_bungalow_price_app>cd templates
C:\mljuly26\L17\p2_bungalow_price_app\templates>notepad home.html
```

Step 2: Coding**app.py**

```
from flask import *
from sqlite3 import *
DB_NAME = "bungalow_price.db"

def db_setup():
    con = None
    try:
        con = connect(DB_NAME)
        sql = "create table if not exists bungalow(location text, area float, price float)"
        cursor = con.cursor()
        cursor.execute(sql)
        con.commit()
        print("done")
    except Exception as e:
        print("issue ", e)
    finally:
        if con is not None:
            con.close()

db_setup()

app = Flask(__name__)
```

```
@app.route("/", methods=["POST", "GET"])
def home():
    if request.method == "POST":
        location = request.form.get("location")
        area = float(request.form.get("area"))
        price = float(request.form.get("price"))
        con = None
        try:
            con = connect(DB_NAME)
            sql = "insert into bungalow values(?, ?, ?)"
            cursor = con.cursor()
            cursor.execute(sql, (location, area, price))
            con.commit()
            msg = "record saved"
            return render_template("home.html", msg=msg)
        except Exception as e:
            print("issue ", e)
            msg = "issue " + str(e)
            return render_template("home.html", msg=msg)
        finally:
            if con is not None:
                con.close()
    else:
        return render_template("home.html")

if __name__ == "__main__":
    app.run(debug=True, use_reloader=True)
```

home.html

```
<html>
  <head>
    <title>
      Bungalow Price Data Capture App by Kamal Sir
    </title>
    <style>
      * {
        font-size:40px;
        text-align:center;
      }
      body {
        background-color:azure;
      }
      .fc {
        border:solid;
        padding: 2%;
        width:60%;
        margin:auto;
        border-radius:40px;
        background-color: white;
      }
    </style>
  </head>
  <body>
    <h1>  Bungalow Price Data Capture App </h1>
    <div class="fc">
      <form method="POST">
        <input type="text"
          name="location"
          placeholder="Enter Location"
          required />
        <br/><br/>
        <input type="number"
          step="any"
          name="area"
          placeholder="Enter Area in Square Feet"
          required />
        <br/><br/>
        <input type="number"
          step="any"
          name="price"
          placeholder="Enter Price in Crores "
          required />
        <br/><br/>
        <input type="submit"
          value="Save Data" />
      </form>
    </div>
```

```
        <h2>
            {{ msg }}
        </h2>
    </body>
</html>
```

Step 3: Run the App

C:\mljuly26\L17\p2_bungalow_price_app\templates>cd..

C:\mljuly26\L17\p2_bungalow_price_app>python app.py

Step 4: Check the Data

C:\mljuly26\L17\p2_bungalow_price_app>sqlite3 bungalow_price.db

SQLite version 3.53.1 2026-05-05 10:34:17

Enter ".help" for usage hints.

sqlite> .tables

bungalow

sqlite> select * from bungalow;
